Examiner's Amendment

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with William Bauer on December 22, 2004.

Examiner's Amendment:

In the claims, change the second claim "65" to claim --66--.

Allowable Subject Matter

Claims 1-67 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a liquid presence, absence or flow monitoring system. Each independent claim identifies the uniquely distinct features "the tubing having an inside diameter at the sensing location selected such that the material of said inside surface of said tubing and said inside diameter of said tubing being large enough such that said liquid product is substantially evacuated from said tubing at said sensing location when said liquid product is substantially absent from said tubing preceding said sensing location, and said inside diameter of said tubing being small enough and said material

of said inside surface being selected such that air remaining in said tubing is substantially absent from said tubing at said sensing location when said liquid product is substantially present in said supply". The cited prior art failed to anticipate the above limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The prior art of Brown et al. (US 6,799,474), Harter et al. (US 4,480,467) and Carlson (US 4,607,254) are cited to show a variety of liquid flow systems.
